IDEM · SPANISH CORPUS · VERSION 1.4

1,294 easy-to-read sentences, aligned to their originals

A sentence-aligned corpus of Spanish public-information texts and their human-made Lectura Fácil versions at A2 level. Every simplified line carries the easy-to-read criteria that produced it.

idem_corpus_es_v1.4.json · 5 November 2026 · simplified by PIM

17 source documents from 9 websites	**107** texts, ES_001 to ES_107	**356** original sentences (alignments)
1,294 simplified lines	**10,542** words in the originals	**35** Lectura Fácil criteria in the catalogue

WHAT IT IS

One sentence in, several lines out

Each original sentence is paired with its easy-to-read version. The simplification is split into short lines, on average **3.6 lines** per sentence and up to 16. The texts hardly get shorter (96% of the original word count) but much easier to take in: an original sentence averages **29.6 words**, a simplified line **7.8**.

Annotated line by line

Every simplified line names the criteria from the Spanish Lectura Fácil catalogue that were applied to it, **1.5 codes** per line on average. 565 lines also mark which parts of the original were hard, and 64 sentences carry review notes where meaning shifted or content was lost.

SOURCES

Regional and city administrations (comunidad.madrid, ajuntament.barcelona.cat, transparencia.lasrozas.es), EU institutions (europarl.europa.eu, citizens.ec.europa.eu), news (eldiario.es), NGO and policy sites (ecologistasenaccion.org, politikon.es) and es.wikipedia.org. Eleven documents are informative texts; the rest are articles, news and a policy document. All are copyright cleared.

The Spanish, Italian and Catalan iDEM corpora are not parallel. Each language has its own catalogue and conventions, so criterion codes must never be compared across languages.

STRUCTURE

Three parts, four levels deep

The file is one JSON object. Metadata and the criteria catalogue sit beside the data; the data itself nests from document down to the single simplified line.

corpus — object
version, date, source file, change log, notes, counts

criteria — 35 entries
code, description, description_en, group, in_official_catalogue, times_used

documents — 17 entries
the data, see below

document — 17 · e.g. ES_030_036 = texts ES_030 to ES_036
document_id · metadata: source_url, creation_date, characters_without_spaces, corpus_category, text_type, topic, complexity_level, simplification_method, institution, tested_by_user_group, copyright_cleared

text — 107 · e.g. ES_032
text_id · translator_id

alignment — 356 · e.g. ES_032-3 = 3rd sentence of ES_032
alignment_id · **original** · source_row · quality_flags (optional)

simplified — 1,294 · position 1, 2, 3 …
position · **text** · criteria_codes · complex_parts · source_row · quality_flags · notes (optional)

A WORKED EXAMPLE

Alignment ES_070-1

ORIGINAL

Se está llevando a cabo el reclutamiento de personas para el próximo panel de ciudadanos sobre un nuevo presupuesto europeo
La Comisión Europea ha puesto en marcha una campaña de reclutamiento para seleccionar aleatoriamente a ciudadanos de los 27 Estados miembros de la UE.

SIMPLIFIED · POSITION · TEXT · CRITERIA CODES

1	La Comisión Europea busca a personas	32 24
2	que formen el próximo panel de ciudadanos.	2
3	El panel de ciudadanos es un grupo de personas	13
4	que debate sobre temas importantes.	13
5	En este panel debatirán sobre un nuevo presupuesto europeo.	2
6	La Comisión Europea para crear este grupo	2
7	elige a los ciudadanos al azar,	12
8	es decir, lo echan a suertes.	12 8

Read the simplified lines in position order to get the full easy-to-read version. One sentence can run over several lines (positions 1–2, 3–4 above). Codes belong to the line they sit on: 12 = replace abstract terms, 13 = define necessary terms, 32 = text-level reorganisation.

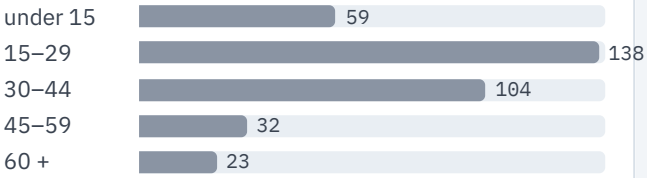

SENTENCES

Long sentences become short lines

Original sentences are long: two thirds have 15 to 44 words. The simplifications break them into lines of mostly 5 to 12 words.

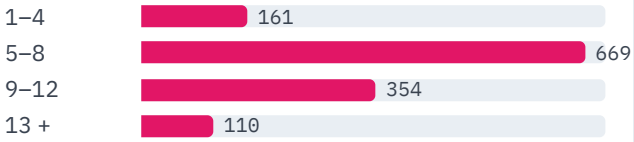

Words per original sentence

Number of alignments, n = 356

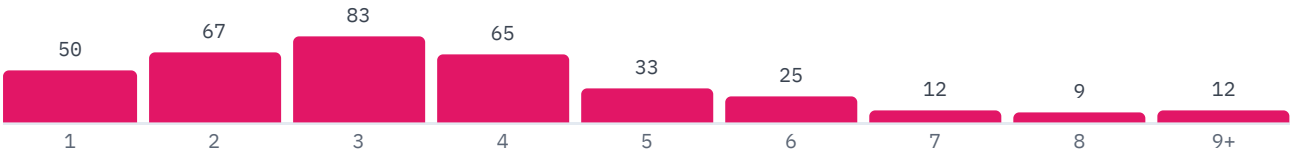

Words per simplified line

Number of simplified entries, n = 1,294

How many lines does one original sentence become?

Number of alignments by count of simplified entries

simplified lines per original sentence

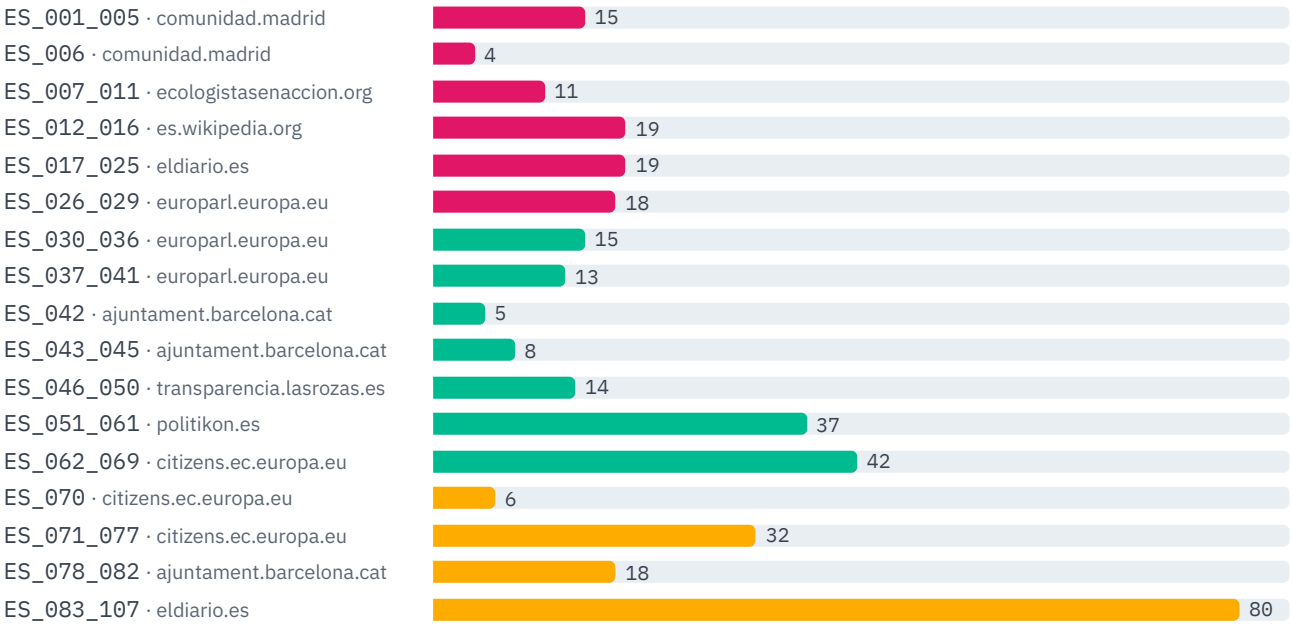

Most sentences become 2 to 4 lines. 50 stay a single line, mostly headings and short questions; 12 are split into nine or more.

DOCUMENTS

One news story makes up a quarter of the corpus

Alignments per document, by translator

translator_1 · 29 texts · 86 alignments translator_2 · 40 texts · 134 alignments translator_3 · 38 texts · 136 alignments

ES_083_107 (eldiario.es, justice and legal affairs) holds 80 alignments and 323 simplified lines. Each document was simplified by one translator.

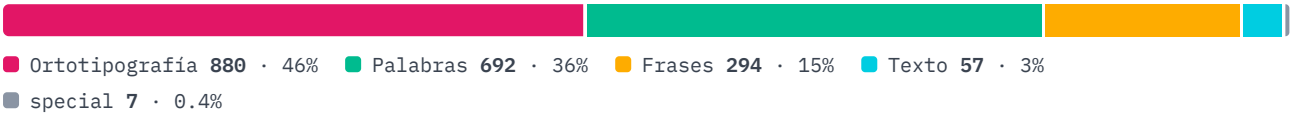

CRITERIA

Line breaks lead, then words

The catalogue has 35 codes in four groups plus two special codes: **0** (sentence kept unchanged) and **00** (explanation added). Code 10 does not exist. Across the corpus, 1,930 codes are applied.

Criteria used, by group

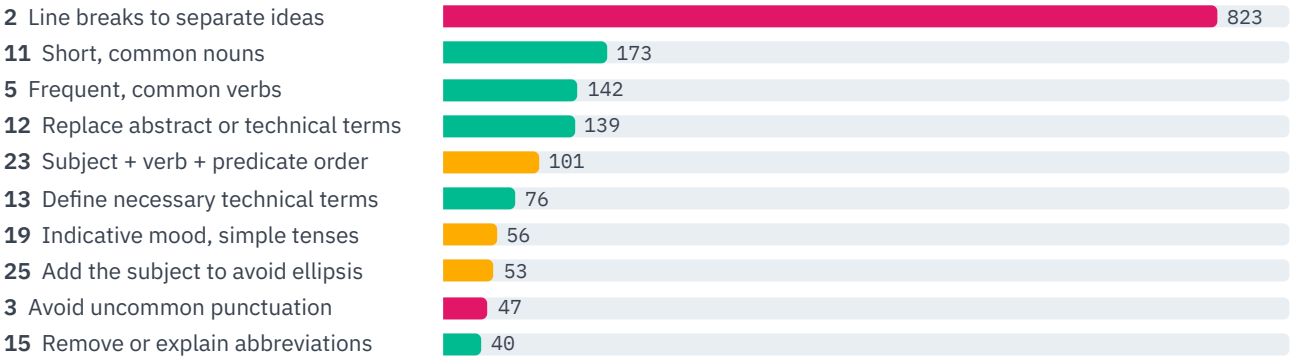

Share of all 1,930 applied codes

Ortotipografía **880** · 46% Palabras **692** · 36% Frases **294** · 15% Texto **57** · 3%
special **7** · 0.4%

The ten most used criteria

Number of simplified lines carrying the code, coloured by group

Code 2 sits on 64% of all simplified lines: splitting text into short lines is the backbone of every simplification. In criteria analyses, consider looking at it separately so it does not dominate.

QUALITY

Review notes

64 of 356 alignments carry `quality_flags`. Most describe content shifts, such as a dropped condition or a narrowed meaning. Flags starting with `[v1.3]` or `[v1.4]` record corrections made in the JSON and name the Excel cells to fix.

Version 1.4

23 clear spelling errors corrected in 21 simplified lines, mostly missing accents (*tambien*, *paises*, *busqueda*) and *auro* for *euro*. Original texts and proper names are unchanged.

USING IT

Reading the corpus correctly

The nested JSON is easy to walk once you know the unit you need: the **alignment** for comparing original and simplified text, the **simplified entry** for analysing criteria.

THINGS TO KNOW WHEN READING IT

POINT	WHAT TO DO
A simplified entry is a line, not always a sentence	Join all entries of an alignment in `position` order before measuring sentences.
`text` is empty or `null` twice (ES_023-2 #5, ES_097-3 #1)	Use `s["text"] or ""`.
Codes are strings, including `"0"` and `"00"`	Look them up in `criteria`; do not cast to integers.
`counts.simplified_sentences` is 1,292	It excludes the 2 empty entries; the file holds 1,294.

READING IT IN PYTHON

```python
import json

corpus = json.load(open("idem_corpus_es_v1.4.json", encoding="utf-8"))

for doc in corpus["documents"]:
    for text in doc["texts"]:
        for al in text["alignments"]:
            lines = sorted(al["simplified"], key=lambda s: s["position"])
            simplified = "\n".join(s["text"] or "" for s in lines)   # text can be null
            print(al["alignment_id"], al["original"], simplified)
```

The full helper script, read_idem_corpus_es.py, and the README sit next to the JSON file.

VERSIONS

VERSION	DATE	CHANGES
1.4	2026-11-05	23 clear spelling errors corrected in 21 simplified lines. Original texts and proper names unchanged. Each correction carries a `[v1.4]` flag.
1.3	2026-09-25	text_id corrections, 4 duplicate lines removed (ES_026), criteria catalogue completed, counts recomputed.
